

Nutcracker Early Pilot & Sandbox Agreement

This Early Pilot Access Agreement ("Agreement") is entered into between Aleph Strategy / Nutcracker ("Provider") and the undersigned Pilot Tester ("Tester").

1. Purpose of Pilot

The Tester acknowledges that Nutcracker is currently in an Early Pilot / Sandbox phase. This is not a final commercial product. The environment is provided as a proof-of-concept for the Aleph Strategy automation engine.

2. Nature of the Service

Nutcracker is a software automation tool designed to execute specific trading strategies. It is not a financial advisory service, a managed fund, or a "miracle" strategy.

Performance: While the Aleph Strategy has a track record of consistent positive ROIC in internal testing, past performance is no guarantee of future results.

Responsibility: The Tester remains solely responsible for their portfolio composition and the underlying fundamentals of the assets they choose to trade.

3. Financial Risk Disclaimer

Tester acknowledges that cryptocurrency trading involves significant risk of loss. * Nutcracker and Aleph Strategy are not responsible for any financial losses, including \$ denominated declines in portfolio value.

The engine is designed to mitigate market-wide drops through strategy implementation, but it cannot prevent losses inherent to market volatility or asset failure.

4. Security & API Constraints

To ensure the highest possible safety during this pilot, the following technical "guardrails" are mandatory:

API Restrictions: Tester must provide API keys restricted strictly to "No Withdrawal" and "Spot Trading Only."

Security Level: Current security is defaulted to basic VPS firewall and standard encryption. While Provider agrees to manage credentials securely and never disclose them to third parties without approval, absolute security is not guaranteed in this pilot stage.

Tester Responsibility: Tester agrees to verify and maintain the "No Withdrawal" status of their API keys at all times. Nutcracker at no point has control over the withdrawal of funds from the Tester's exchange account.

5. Fees and Costs

No Profit Sharing: Provider imposes no management fees or profit-sharing arrangements on the Tester for the duration of this pilot.

Operational Costs: Tester may be asked to cover basic VPS hosting fees associated with their specific bot instance, if applicable.

6. Data Usage & Validation

Tester grants Aleph Strategy / Nutcracker permission to utilize anonymized performance results (including PnL, turnover, and trade metrics) for:

Internal record-keeping and engine optimization.

External validation of engine efficiency (specific external use will be explicitly requested and approved by the Tester).

7. Termination & Cancellation

The Tester is the "driver" of this process and maintains total autonomy:

Revocation: Tester may revoke access or stop the bot at any time via their console.

Deletion: Tester may request the immediate deletion of their bot instance, including all trading data, API keys, and parameters.

Scope: Cancellation only affects the automation provided by Nutcracker. It has no effect on the Tester's underlying exchange account or portfolio constituents.

Execution

By providing API credentials and initiating the Nutcracker instance, the Tester affirms they have read, understood, and agreed to the terms above.
